

BURK-EASTLAND OIL CO.

MUCH INTEREST DIRECTED TOWARD GREAT OIL DOME NORTHWEST OF THE BURK TOWNSITE. MANY LOCATIONS NOTED

The Following Article Taken From the Wichita Falls Tribune of February 22nd
Our Lease is Right in the Middle of the Big Dome Described in the Following Clipping:

WE GET CLOSE UP TO PRODUCTION

Attracted by the sale of the Marine well for \$3,500,000 and an offer of \$20,000,000 for one-half interest in the Humble well, members of the oil fraternity are turning their thoughts and activities during the last few days to the great oil dome upon which is located the Humble well on the Herndon tract. The activities in this direction are reported to be of the very broadest scope and tend to throw the development in that direction.

It is authentically reported that approximately fifty locations have been made in this section during the past few days in the neighborhood of two miles north and two miles west of the Humble well, which is located on the great oil dome about one mile northwest of the townsite of Burkburnett. These locations have been made by some of the largest operating companies of the field, who have expressed the utmost confidence in the prospects of this area as an oil producing locality.

While the reports from the Humble well give a flow of about one thousand barrels, it has lately been reported that the flow of the Humble well is between three and four thousand barrels. This report has not been verified by officials of the company, but there is a report, which oil men contend is not 'wild' by any means, that this is true.

MAY BEAT BURKBURNETT

If the flow of the Humble well meets the amount named in the most recent reports and other holdings in this area make a good showing, it is the firm opinion of some of the most successful operators that this

field will be a second Burkburnett, if not still greater in the way of production.

One of the most impressive features of this section to the oil man is the fact that the dome upon which the wells are located is an old indication of a great pool of oil. This dome, it is said by experts, is formed through the pressure of gas which develops from the big underlay of oil. If this proves true in this case, and the fact that the Humble has brought in a big producer, having not yet been put to swabbing or placed on the pump, gives proof that it is true, there will be no stop to the production from these locations.

ACTIVITY INCREASES

The flood of activity in this direction during the last few days has been watched with much interest. Although the report of a drastic "blue sky" law has attracted much attention and has somewhat caused a lull in the oil fields and in the stock exchanges, there has been very little decrease in the operations in this direction. Derricks are going up here and there and new locations are being made daily.

Among some of the biggest operators in the oil business who are making locations near the Humble well and in the vicinity of the great dome are C. G. Wood, Hammond-Art Company, making a second location; Burkburnett Home Oil Company, making two locations. Other companies are reported to have launched out on this section during the last few days, during which time more than fifty locations have been made.

WE STAY IN THE PROVEN FIELD!
